

Specialized Services

These shipment types have very specific requirements for packaging.

Pets (Cats & Dogs)

- Refer to our comprehensive Pet Air guide here: [Pet Air](#)

Seafood

- Refer to our comprehensive Seafood packaging guide here: [Seafood Packaging Guide](#)

High Value Cargo

Our Sales and Customer Service teams will work with shippers of high-value cargo (VAL) to ensure packaging meets strict security and protective criteria.

Cremated Human Remains

- The inner packaging must be strong, durable, and constructed in such a manner as to protect the contents. An urn or durable container is the preferred method of inner packaging.
- Cremation containers are not acceptable for the transportation of human remains by air. These temporary containers are usually of plastic construction with a simple plastic bag containing the remains inside.
- An urn is typically made from metal, stone or wood and is therefore more suitable for air transportation.
- Sufficient cushioning all around the inner primary sift-proof container will prevent it from shifting inside the outer shipping package during transit and absorb any shock to prevent breakage.
- Cremated remains must be shipped using a strong and durable outer package to withstand handling during transportation.
